# MY FIRST PATCH

## What's a patch?

---

*A patch is a piece of software designed to update a computer program or its supporting data, to fix or improve it.*

Source : Wikipedia

## My story

---

- Missing section in ALTER TABLE documentation
- Discussion with peers
- Bug reporting
- Patch creation with guru mentors
- Patch submission

## Creating the patch

---

- PostgreSQL git clone
- Building from source code
- Building documentation from source code
- Copy/Paste missing section from CREATE TABLE to ALTER TABLE
- Re-building documentation from source code

## git diff

---

- With context
- Use the wiki [Creating clean patches](#) page
- [Format your git diff output](#)

But sometimes, even the best men don't follow instructions...

When I want a context diff, I just do:

git diff | filterdiff --format=context

--
Robert Haas
EnterpriseDB: http://www.enterprisedb.com
The Enterprise PostgreSQL Company
```

git diff without context to the left,  
git diff with context to the right

```
diff --git a/doc/src/sgml/ref/alter_table.sgml
index 7bcf242..26eda7e 100644

## My submission

Hi,

In documentation, I've found that `table_constraint` is used in the ALTER TABLE synopsis but that definition of `table_constraint` is missing, so I submitted bug #14873.

I found the `table_constraint` definition in the CREATE TABLE synopsis and I just copied/pasted it on the ALTER TABLE synopsis.

The patch should apply to MASTER. I build and tested it successfully on my computer.

There shouldn't be any platform-specific content.

You will find enclosed my patch. I tried my best to follow instructions on how to submit a patch.

Regards,

Lætitia

Use the [Submitting a patch](#) Wiki page

## The result

Thanks, this looks pretty reasonable, but did you happen to look for any other keywords in the ALTER TABLE that should really be in ALTER TABLE also?

I'm specifically looking at, at least, `partition_bound_spec`. Maybe you could propose an updated patch which addresses that also, and any other cases you find?

Thanks again!

## Patch corrected

Ah, yes. I remember having left out `partition_bound_spec` simply because I thought it was kind of how it was supposed to be done, seeing that neither `column_constraint` and `table_constraint` were expanded in the ALTER TABLE's synopsis.

It seems that there are indeed a couple of other things that need to be brought over to ALTER TABLE synopsis including `partition_bound_spec`. [9f295c08f877 \[1\]](#) added `table_constraint`, but missed to add the description of `index_parameters` and `exclude_element` which are referenced therein.

Attached find updated version of the Lætitia's patch.

Thanks,  
Amit

---	--------------	-------------------------	--	--------	------------------	------------------

Oh no!

Here's an update to move the new stuff to the correct side of the closing "`</synopsis>`". Builds for me, and the typesetting looks OK. I'm not sure why the preexisting bogo-productions have inconsistent indentation levels (looking at `table_constraint_using_index`) but that's not this patch's fault.

## And another section was missing!

Thanks for fixing that.

I noticed that `partition_bound_spec` in the patch is missing hash partition bound syntax that was added after the original patch was written. Fixed in the attached.

Thanks,  
Amit

It's ready!

Improve ALTER TABLE synopsis

Add into the ALTER TABLE synopsis the definition of partition\_bound\_spec, column\_constraint, index\_parameters and exclude\_element.

Initial patch by Lætitia Avrot, with further improvements by Amit Langote and Thomas Munro.

What next ?

---

- Correcting some spelling errors in french translation
- Studying the code
- Observing reviewing in January Commit fest
- Proposed conf talks (and got accepted each time for now)

# HOW YOU CAN HELP

## Simple contributor

---

- use PostgreSQL
- share your experience
