

Choosing a k8s PostgreSQL operator for the Square Kilometre array Observatory

Mauricio Zambrano
May 2025– PGCONF.de

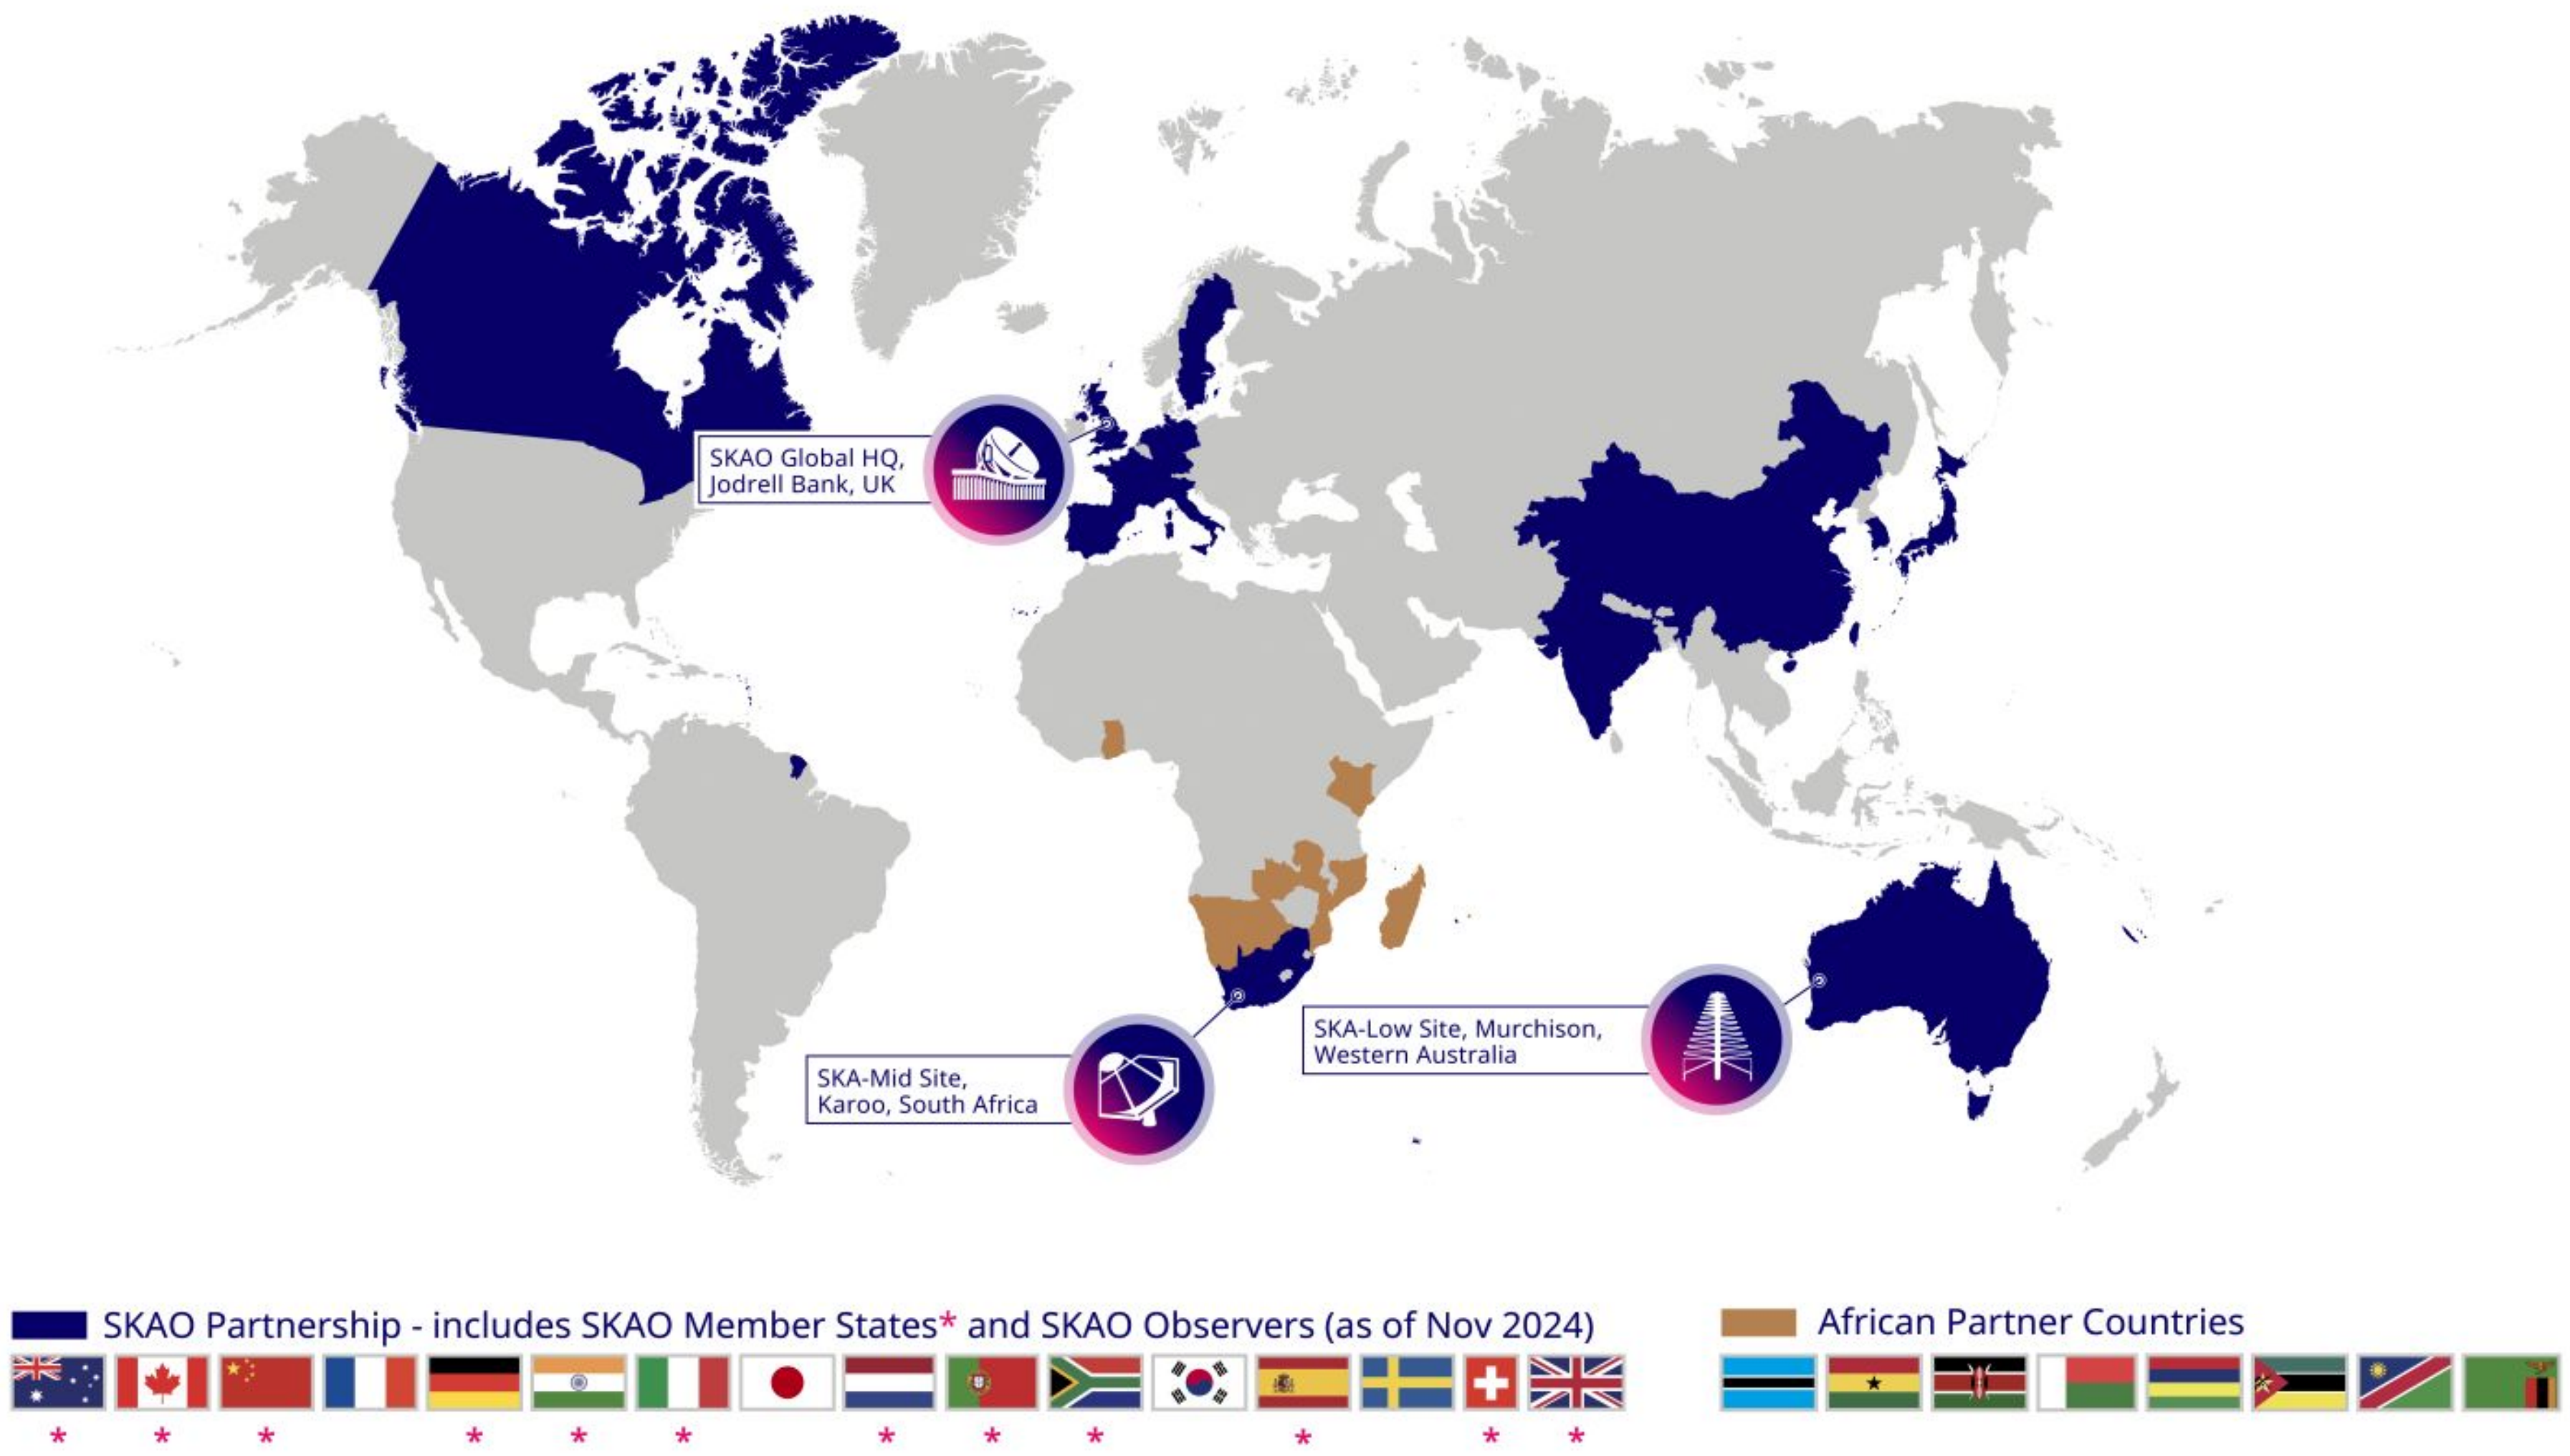

SKA Observatory

Building the two largest telescope arrays in the world, located in South Africa and Australia, made possible through a global collaboration.

The SKAO

Definitions

- Three sites:
 - UK: HQ - Jodrell Bank
 - ZA: MID telescope - Karoo
 - Cape Town
 - AU: LOW telescope - Murchinson
 - Perth

DB Environment:

- Vanilla K8s
- PostgreSQL 16.x

100%OpenSource

- Dev stuff
 - Tango controls framework - cpp, python
 - SAFE Agile framework

PostgreSQL@SKAO

- Monitoring via the tango HDB++ archiver on timescale:
 - Helm chart, not maintained any more by Timescale
 - Patroni based
 - Called Engineering Data Archive (EDA)
- Relational databases:
 - EMS: Engineering/telescope performance
 - OSO -> ODA Observation metadata
 - DLM: Observatory Lifecycle management
 - Data reduction

Stackgres Vs CNPG

- Good documentation
- +100 extensions: Timescale
- We know patroni works on k8s and we like it

Errare humanum est:

- We take our backup and import it on CNPG.

Mauricio.Zambrano@skao.int

SKAO Database Engineer

Many thanks!

*We recognise and acknowledge the
Indigenous peoples and cultures that have
traditionally lived on the lands on which
our facilities are located.*
