WHAT DO THEY KNOW?

DO THEY KNOW THINGS??

LET'S FIND OUT!

WHAT IS NOT CODE IN YOUR CODE?

COMMENTS

-- Fool me once.

```
SELECT col1  
      FROM my_table;
```

COMMENTS

-- Fool me once.

```
SELECT col1  
    FROM my_table;
```

/* Fool me twice.

Fool me chicken soup with rice.

*/

```
SELECT col1  
    FROM my_table;
```

**BEING ANTISOCIAL IS NOT A GOOD EXCUSE
TO AVOID COMMENTING.
ACTUALLY IT IS QUITE THE OPPOSITE.**

COMMENTS BAD IDEAS

```
/* Extract all distinct cities
   from the weather table.
   Sorted.
*/
SELECT DISTINCT city -- avoid duplication
FROM weather
ORDER BY city; -- sorted by city
```

SUBTITLES FOR YOUR CODE

COMMENTS BAD IDEAS

```
/* author: Bojack Horseman
   email: SecretariatRulez96@hotmail.com
  created: 2013-02-20
   reason: Extract all the cities
  -----
  changed: 2015-11-21
   author: Todd Chavez
   reason: Removed DISTINCT
  -----
  changed: 2015-11-22
   author: Todd Chavez
   reason: Added back DISTINCT, I'm sorry Bojack
*/
```

```
SELECT DISTINCT city
FROM weather
ORDER BY city;
```

YOUR SOURCE CONTROL SYSTEM

COMMENTS BAD IDEAS

|   author: Bojack Horseman   |
|   email: SecretariatRulez96@hotmail.com |
|   created: 2013-02-20      |
|   reason: Extract all the cities |
\*-----*/
```

```
SELECT DISTINCT city
FROM weather
ORDER BY city;
```

**A WAY TO EXPRESS
YOUR INNER ARTIST**

COMMENTS BAD IDEAS

```
/*  
    .-^ ^ ^- / /  
    -- /      /  
    <-- . | - | - |  
*/
```

This query is sooo old

```
SELECT DISTINCT city  
FROM weather  
ORDER BY city;
```

**A WAY TO EXPRESS
YOUR INNER ARTIST**

ASCII art graphic consisting of a grid of characters including @, #, +, ;, and ., forming a stylized shape.

COMMENTS BAD IDEAS

```
SELECT DISTINCT city
FROM weather
WHERE country = 'US'
-- keeping this in case we need it in the future
-- WHERE country <> 'US'
ORDER BY city;
```

BE A CODE HOARDER

COMMENTS GOOD PRACTICES

- **COMMENTS ARE TO DESCRIBE WHY NOT HOW**
- **CONSIDER YOUR COMMENTS AS CODE SMELL**
- **IF YOU COMMENT, TRY TO EXTRACT YOUR CODE**

```

● CHANGED THE ALIASES

● ORDERED THE JOIN CONDITIONS

● ADDED COMMENTS

FROM [STACKOVERFLOW](#)

USE PROPER ALIASES

```
SELECT g.id,  
       g.description  
FROM gallery g  
INNER JOIN gallery_to_tag to_tag  
ON g.id = to_tag.gallery_id  
INNER JOIN tag  
ON tag.id = to_tag.tag_id  
WHERE tag.term IN ('hi', 'hey')  
GROUP BY g.id,  
         g.description  
HAVING COUNT(1) = 2
```

FROM [STACKOVERFLOW](#)

QUICK TIP II

**WHEN WRITING
INSERT INTO
ALWAYS
LIST YOUR COLUMNS**

**EVERYTHING YOU ALWAYS WANTED TO KNOW
ABOUT SELECT *
BUT WERE AFRAID TO ASK**

SELECT * - WHY NOT

- **UNNECESSARY DATA**
- **NOT USING INDEXES**
- **YOU CANNOT RELY ON COLUMN ORDER**

SELECT * - WHEN OK

- *** AS ROW - COUNT(*)**
- **AD-HOC QUERIES**

QUICK TIP III

**ORDER BY AND GROUP BY
USING ORDINAL
IS A BAD IDEA**

RIING... RIING... RIING...

JOIN SYNTAX

```
SELECT p.id,  
         a.id,  
         a.address_1  
FROM   person p,  
         address a  
WHERE  p.id = a.id  
AND    p.name = 'Bojack'
```

JOIN SYNTAX

```
SELECT p.id,  
         a.id,  
         a.address_1  
FROM person p  
INNER JOIN address a  
         ON p.id = a.id  
WHERE p.name = 'Bojack'
```

JOIN SYNTAX

```
SELECT p.id,  
        a.id,  
        a.address_1  
FROM person p  
INNER JOIN address a  
        ON p.id = a.id  
WHERE p.name = 'Bojack'
```

JOIN SYNTAX

```
SELECT p.id,  
        a.id,  
        a.address_1  
FROM person p  
INNER JOIN address a  
        ON p.id = a.id  
WHERE p.name = 'Bojack'
```

- **SEPARATE WHERE FROM JOIN CONDITIONS**
- **AVOID CROSS JOINS**

JOIN SYNTAX

```
SELECT p.id,  
        a.id,  
        a.address_1  
FROM person p,  
       address a  
WHERE p.id (+) = a.id  
       AND p.name = 'Bojack'
```

```
SELECT p.id,  
        a.id,  
        a.address_1  
FROM person p  
RIGHT JOIN address a  
         ON p.id = a.id  
WHERE p.name = 'Bojack'
```

JOIN SYNTAX

```
SELECT p.id,  
        a.id,  
        a.address_1  
FROM person p,  
       address a  
WHERE p.id = a.id (+)  
       AND p.name = 'Bojack'
```

```
SELECT p.id,  
        a.id,  
        a.address_1  
FROM person p  
LEFT JOIN address a  
         ON p.id = a.id  
WHERE p.name = 'Bojack'
```

BUT WHY?

JOIN SYNTAX

REASONS WHY PEOPLE USE OLD JOIN SYNTAX (FROM [STACKOVERFLOW](#)):

- PEOPLE ARE USED TO IT
- PEOPLE ARE LAZY: "OLD STYLE" = LESS TYPING
- BEGINNERS OFTEN HAVE PROBLEMS TO UNDERSTAND THE SQL-92 JOIN SYNTAX
- PEOPLE ARE UNAWARE OF THE BENEFITS: YOU FILTER A TABLE *BEFORE* YOU DO AN OUTER JOIN, AND NOT AFTER IT WHEN ALL YOU HAVE IS THE WHERE CLAUSE
- PEOPLE DON'T SWITCH TO NEW SYNTAX JUST BECAUSE IT IS THERE
- IT'S AN ORACLE THING

JOIN SYNTAX

MY QUESTION

Dear Oracle Masters,

here is a poor disciple looking for guidance, I know the way to reach the true knowledge does not have an end, but I would appreciate few words to make my journey more safe, especially for my fellow travelers.

Here is my question, **we are already in the second half of year 2017 and I still meet people who think it is a good idea to write joins like:**

...

I see the advantages of the second syntax, even without playing with outer joins, and it is easy to explain what are the benefits. Often the answer I get is that the first one is the Oracle "recommended" syntax.

FROM [ASK TOM](#)

JOIN SYNTAX

THEIR ANSWER (PART 1 of 2)

Oracle style joins may have been recommended in the past, but the current guidance is:

Oracle recommends that you use the FROM clause OUTER JOIN syntax rather than the Oracle join operator

<http://docs.oracle.com/database/122/SQLRF/Joins.htm#SQLRF30046>

This is because there are number of restrictions that apply to the (+) operator, but not the "outer join" clause. Follow the link for the full list.

FROM [ASK TOM](#)

JOIN SYNTAX

THEIR ANSWER (PART 2 of 2)

Materialized View Query Rewrite

Currently ANSI syntax isn't fully supported for query rewrite. So if you use MVs a lot you're better off sticking with Oracle style.

Personally I prefer ANSI style. But I think it's more important for your code to be consistent. This makes it easier to follow.

If working on a legacy app all coded using Oracle syntax, I'd use that.

FROM [ASK TOM](#)

JOIN SYNTAX

OTHER THINGS THAT COULD GO WRONG:

- ORDER OF COLUMNS
- MIX WHERE AND JOIN CONDITIONS
- USING DISTINCT

JOIN SYNTAX

```
SELECT * FROM (  
    SELECT TP.TOPIC_ID, CK.NAME  
    FROM TD_TOPIC TP  
    INNER JOIN TD_CIRCLE CK on CK.CIRCLE_ID =  
TP.CIRCLE_ID AND CK.VALID = 1 AND SYSDATE > CK.EFF_TIME  
    WHERE TP.VALID = 1 AND TP.FORWARD_FROM_TOPIC_ID = 0  
    ORDER BY TP.CREATE_TIME DESC  
) WHERE ROWNUM<21
```

JOIN SYNTAX

```
SELECT *
FROM (
    SELECT TP.TOPIC_ID,
           CK.NAME
    FROM TD_TOPIC TP
    INNER JOIN TD_CIRCLE CK
    ON CK.CIRCLE_ID = TP.CIRCLE_ID
    AND CK.VALID = 1
    AND SYSDATE > CK.EFF_TIME
    WHERE TP.VALID = 1
    AND TP.FORWARD_FROM_TOPIC_ID = 0
    ORDER BY TP.CREATE_TIME DESC
)
WHERE ROWNUM < 21
```

JOIN SYNTAX

```
SELECT *
FROM (
    SELECT TP.TOPIC_ID,
           CK.NAME
    FROM TD_TOPIC TP
    INNER JOIN TD_CIRCLE CK
    ON CK.CIRCLE_ID = TP.CIRCLE_ID
    WHERE TP.VALID = 1
    AND TP.FORWARD_FROM_TOPIC_ID = 0
    AND CK.VALID = 1
    AND CK.EFF_TIME < SYSDATE
    ORDER BY TP.CREATE_TIME DESC
)
WHERE ROWNUM < 21
```
