

Sustainable Database Performance Profiling in PostgreSQL

Dirk Krautschick
PG Day Paris 14.03.2024

#whoami

Dirk Krautschick
Solution Architect

with Aiven since Nov 2023

16 years

DBA, Trainer, Consulting, Sales Engineering

PostgreSQL, Oracle

Married, 2 Junior DBAs

Mountainbike, swimming, movies, music,
hifi/home cinema, 8 bit computing

Disclaimer

Different audience, different perspectives

My experience, my honest opinion

Let's stay open minded

Always open for discussions

What happened so far...

There was a talk...

“Pro-Active Performance Analysis in PostgreSQL”

<https://www.youtube.com/watch?v=rgdA0FwVShI>

About

- Performance problems overall

- Different analysis approaches

- Recommendations/usage of Extensions

What happened so far...

Solid feedback, consensus in practical experiences

Many questions about “THAT LAST PART of the talk”

Sick of giving this talk after so many times ... :-)

Motivation to do a Spin-Off talk!

Performance Problems

RECAP

In PostgreSQL every relevant information is there...

...but only for **NOW!**

Obvious Sources

Parameters, Sizing (at that time!)

Information_schema, system catalogues

Main Challenge: How to handle, keep and collect all that stuff!

What about monitoring...?

RECAP

For sure, monitoring is essential, but...

...it shows mostly

that **something is slow**, sometimes maybe...

what is exactly slow, but almost never...

why it is slow!

PostgreSQL insights necessary

Deep dive or investigation as a next step anyway

What about logging...

RECAP

PostgreSQL logging is awesome

Exhaustive possibilities

Straight and easy configuration

Be aware of storage and load

High maintenance

Evaluate Logging strategies

```
log_line_prefix = '%t [%p]:  
user=%u,db=%d,app=%a,client=%h ,  
...  
log_parser_stats = off  
log_planner_stats = off  
log_executor_stats = off  
log_statement_stats = on  
...  
log_checkpoints = on  
log_connections = on  
log_disconnections = on  
log_lock_waits = on  
log_temp_files = 0  
log_autovacuum_min_duration = 0  
log_error_verbosity = default  
...  
log_min_messages = debug5  
log_min_error_statement = debug5  
log_min_duration_statement = 0  
log_min_duration_sample = 0  
...  
log_statement = 'all'
```

PG_STAT_STATEMENTS

RECAP

Statement level statistics

Required by several monitoring tools

Statement based collection of e.g.

Executions

Execution times (min, max, average)

Rows

Blocks read/write

...

# \d pg_stat_statements		
View "public.pg_stat_statements"		
Column	Type	...
userid	oid	...
dbid	oid	...
queryid	bigint	...
query	text	...
total_plan_time	double precision	...
...		
calls	bigint	...
total_exec_time	double precision	...
min_exec_time	double precision	...
max_exec_time	double precision	...
mean_exec_time	double precision	...
stddev_exec_time	double precision	...
rows	bigint	...
...		
blk_read_time	double precision	...
blk_write_time	double precision	...
...		

PG_STAT_STATEMENTS

RECAP

```
# SELECT
    substring(query, 1, 50) as short_query,
    round(total_exec_time) as total_exec_time, calls,
    round(mean_exec_time) as mean_exec_time,
    round(100 * total_exec_time / (SELECT sum(total_exec_time) FROM pg_stat_statements)) as percentage
FROM
    pg_stat_statements
ORDER BY
    percentage desc;
```

short_query	total_exec_time	calls	mean_exec_time	percentage
UPDATE pgbench_branches SET bbalance = bbalance + 1	7114	1500	5	63
UPDATE pgbench_tellers SET tbalance = tbalance + \$1	2506	1500	2	22
copy pgbench_accounts from stdin	664	1	664	6
UPDATE pgbench_accounts SET abalance = abalance + 1	194	1500	0	2
alter table pgbench_accounts add primary key (aid)	193	1	193	2
vacuum analyze pgbench_accounts	138	1	138	1
...				

PG_STAT_KCACHE

RECAP

Statistics about reads/writes on filesystem

Statistics about CPU usage

pg_stat_statements is required

```
postgres=# \d pg_stat_kcache_detail;
```

Column	Type	Collation	Nullable	Default
datname	name			
plan_user_time	double precision			
plan_system_time	double precision			
plan_minflts	numeric			
plan_majflts	numeric			
plan_nswaps	numeric			
plan_reads	numeric			
plan_reads_blks	numeric			
plan_writes	numeric			
plan_writes_blks	numeric			
...				
plan_nivcsws	numeric			
exec_user_time	double precision			
exec_system_time	double precision			
...				
exec_nsignals	numeric			
exec_nvcsws	numeric			
exec_nivcsws	numeric			

What's still missing...?

RECAP

...

...handling WAIT_EVENTS!!!

RECAP

STILL_WAITING

PG_WAIT_SAMPLING

RECAP

Wait events from pg_stat_activity

Sampled statistics of wait events

Combination with pg_stat_statements

github.com/postgrespro/pg_wait_sampling

Views

pg_wait_sampling_current

pg_wait_sampling_history

pg_wait_sampling_profile

Functions

pg_wait_sampling_get_current(pid)

pg_wait_sampling_reset_profile()

PG_WAIT_SAMPLING

RECAP

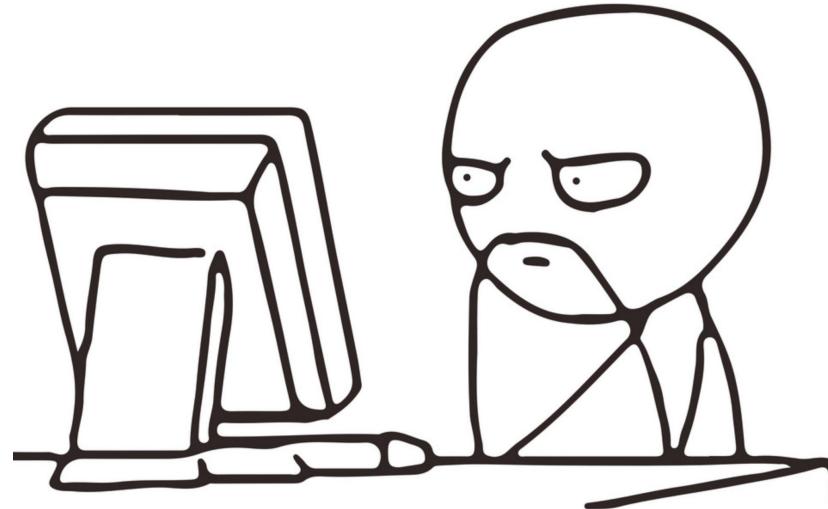

```
postgres=# select * from pg_wait_sampling_profile order by pid, count desc;

pid | event_type |      event      |      queryid      | count
----+-----+-----+-----+-----+-----+
1689 | IO        | DataFileWrite | 2862011717192834034 | 4010499
1685 | IO        | DataFileRead  | 2862011717192834034 | 4010097

...
```

The Idea

Getting sustainable?

Think outside the Box

Let's pick a random example...

... let's say ... Oracle Database :-)

Collects almost everything per default (sometimes sampled)

Interpretation with

Querying Views (obviously!)

Statspack (basic, always available and “costless”)

Think outside the Box

Let's pick a random example...

... let's say ... Oracle Database :-)

Collects almost everything per default (sometimes sampled)

Interpretation with

Querying Views (obviously!)

Statspack (basic, always available and “costless”)

Diagnostic and Tuning Pack (expensive Option)

Only for Enterprise Edition

Several Tools, like ASH, AWR,...

Think outside the Box

Frequent snapshots of performance data in a repository

Defined time periods and retention

Creation of nice reports based on those snapshots

Time frame between two or more snapshots

Think outside the Box

Frequent snapshots of performance data in a repository

Defined time periods and retention

Creation of nice reports based on those snapshots

Time frame between two or more snapshots

But hey, there was already...

RECAP

Advanced logging analysis reporting

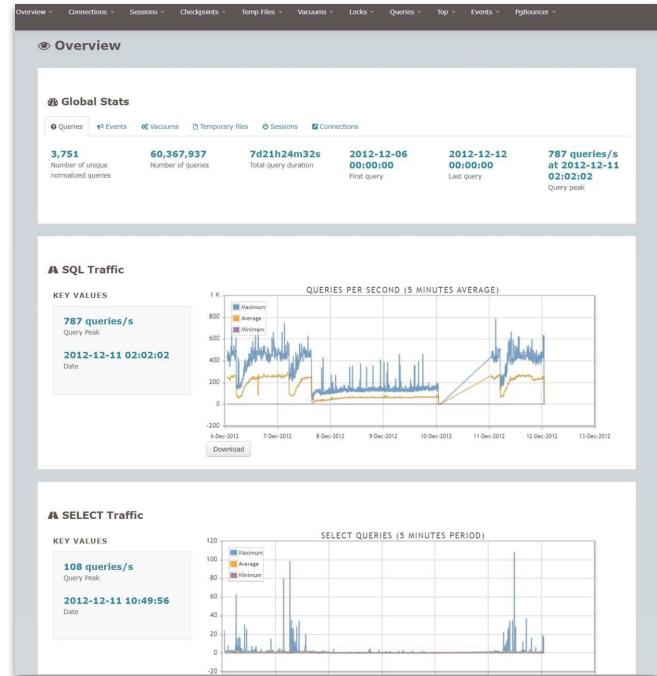

<https://pgbadger.darold.net/>

Incremental daily/cumulative weekly reports

The right direction, but still

Massive logging necessary

Log file handling

The Idea - Getting sustainable?

Ring-Buffer-like settings in extensions are volatile

Several different retention

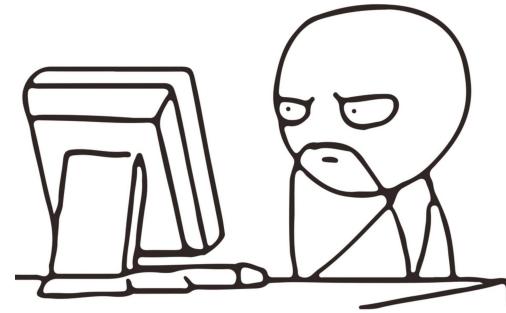

Several Views, Tables...but also volatile

How to handle the collection of all that information?

The Idea

putting all in a repository/database

while handling the retention of all information

PG_PROFILE - Introduction

A good or the actual only(?) Example

Sample collection of
System Catalogue, information_schema

PG_STAT_STATEMENTS

PG_STAT_KCACHE

PG_WAIT_SAMPLING

PG_PROFILE - Example Report

Contents Filter... Everywhere ▾

PG_PROFILE - Report content

Server Statistics

SQL query Statistics

Wait Event Statistics

Schema Object Statistics

User Function Statistics

Vacuum-related stats

Cluster settings

PG_PROFILE - Development

Initiated by Andrei Zubkov

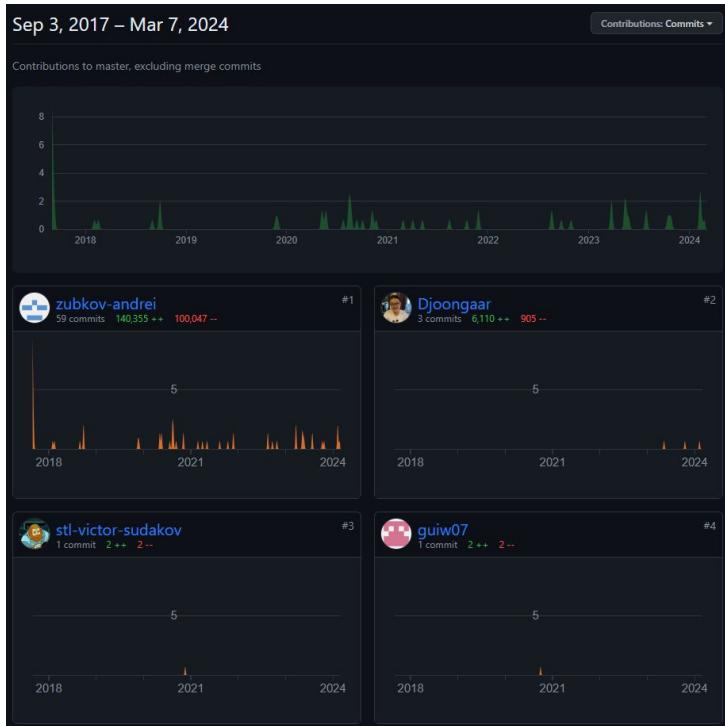

Individual Open Source license

https://github.com/zubkov-andrei/pg_profile

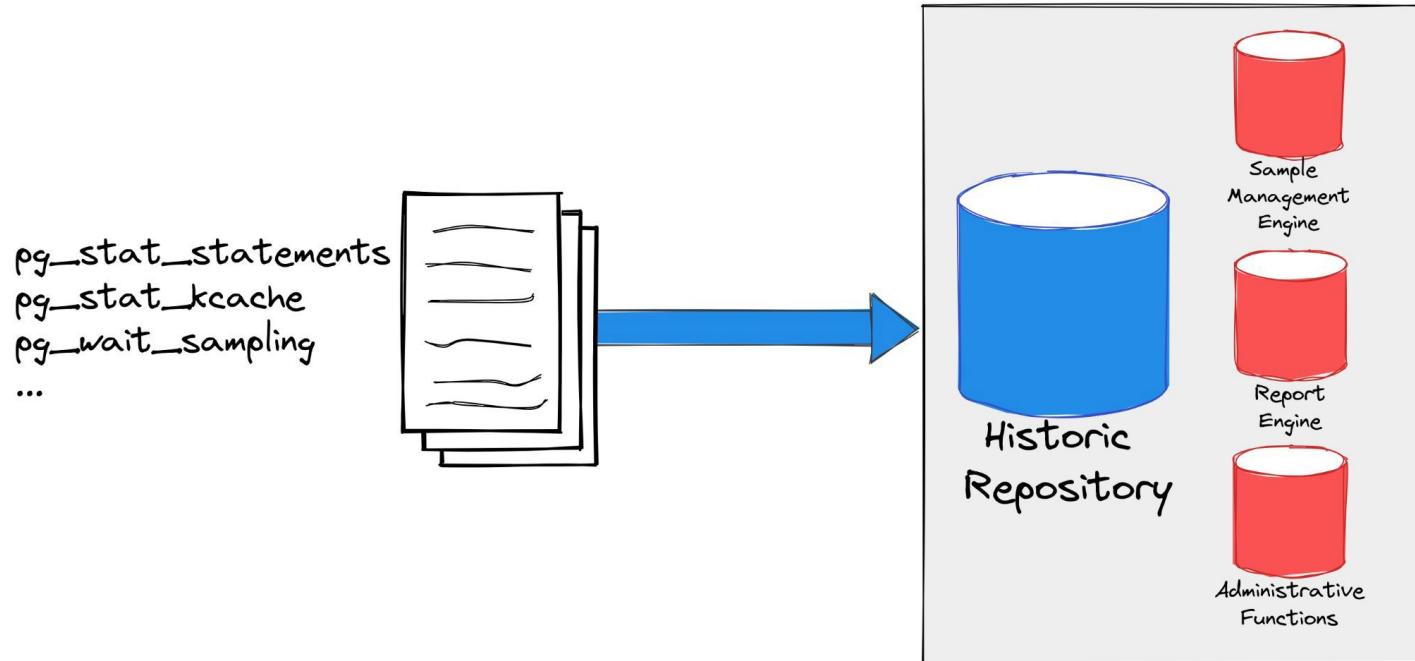

Starting Release v0.0.7 (Nov 2019)

Actual Release v4.4 (Feb 2024)

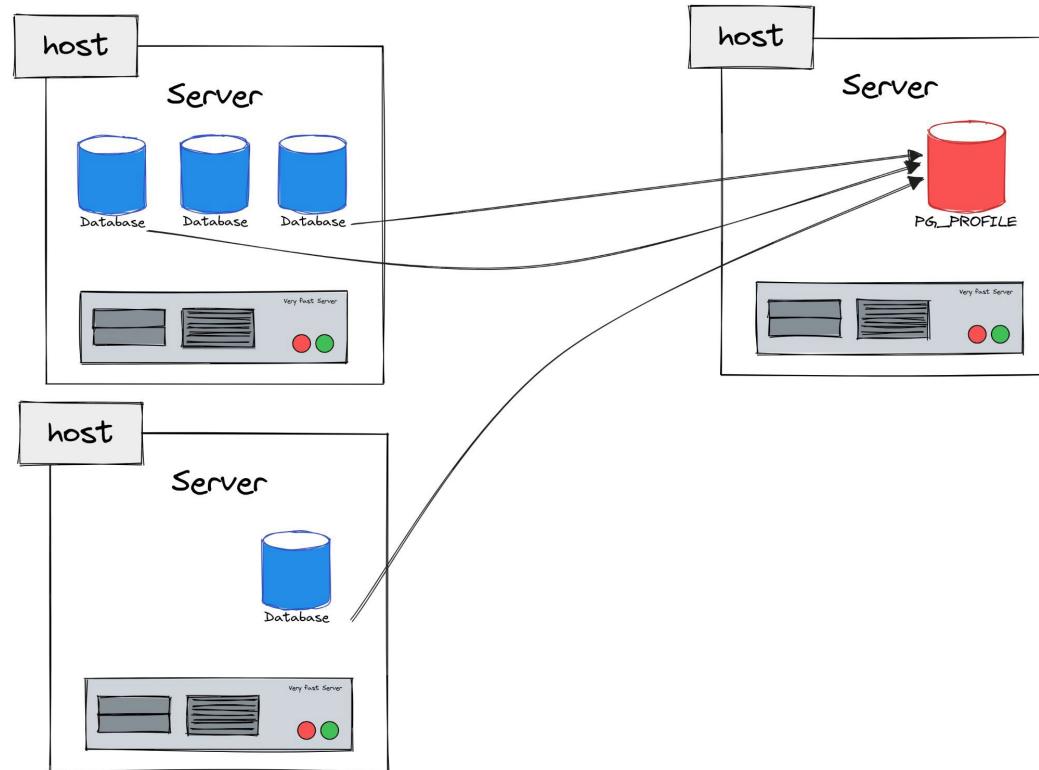

Pure PL/PGsql-based

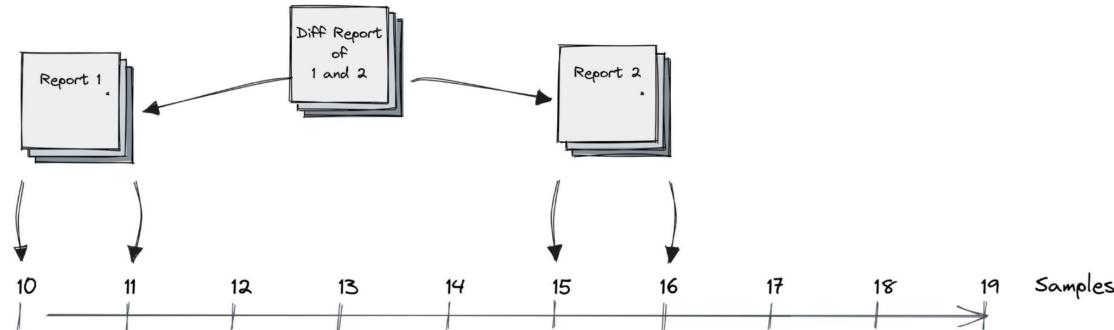

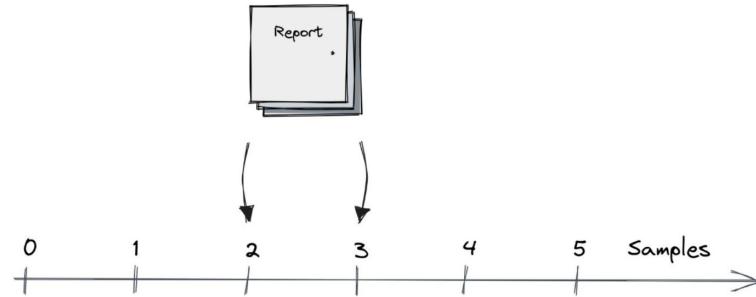

PG_PROFILE - Architecture

PG_PROFILE - Architecture

PG_PROFILE - Creating Reports

PG_PROFILE - Prerequisite and Setup

Extension `dblink` (part of contrib)

Repositories, e.g.

```
# sudo dnf install pg_profile_16
```

Direct from github

```
# curl -LJO https://github.com/zubkov-andrei/pg_profile/releases/download/4.4/pg_profile--4.4.tar.gz
# sudo tar xzf pg_profile--4.4.tar.gz --directory $(pg_config --sharedir)/extension
```

PG_PROFILE - Prerequisites

Create Schema for Repository (optional)

```
CREATE SCHEMA profile;
```

Activate necessary Extensions

```
CREATE EXTENSION pg_profile SCHEMA profile;
```

```
CREATE EXTENSION dblink;
```

PG_PROFILE - Prerequisites on source DBs

Preload Extensions (**of your choice!**)

Set few recommended Parameters

```
# vi $PGDATA/postgresql.conf  
...  
shared_preload_libraries = 'pg_stat_statements, pg_wait_sampling, pg_stat_kcache'  
...  
track_activities = on  
track_counts = on  
track_io_timing = on  
track_wal_io_timing = on  
track_functions = all
```

PG_PROFILE - Configuration

Consider extension parameters

```
pg_profile.topn = 20
pg_profile.max_sample_age = 7
pg_profile.track_sample_timings = off
pg_profile.max_query_length = 20000
```

As well for the related extensions, like e.g.

```
pg_stat_statements.max = 10000
pg_stat_statements.track = 'top'
```

PG_PROFILE - Adding Clusters/Servers for Collection

Add Server/Database

```
SELECT profile.create_server('core16','host=node0 dbname=postgres port=50160');
```

Other functions

```
profile.drop_server(server name)
profile.enable_server(server name)
profile.disable_server(server name)
profile.show_servers()
...
...
```

PG_PROFILE - Collecting Data

Take a sample

```
select * from profile.take_sample();  
select * from profile.take_sample('core16');
```

Check existing samples

```
select * from profile.show_samples();  
select * from profile.show_samples('core16');
```

PG_PROFILE - Collecting Data

Best Practice Strategy

Frequented 30 Min Samples, starting point

Consider manual created Samples

Baselines

Putting into cron

```
*/30 * * * * psql -c 'SELECT profile.take_sample()' > /dev/null 2>&1
```

PG_PROFILE - Baselines

Tagged Group of Samples

Independent Retention

E.g. for bulk operations, load testings,...

Example handling

```
select * from profile.show_baselines();  
select * from profile.create_baseline('core16', 'pgbench_run' , 70, 71);
```

PG_PROFILE - Creating Reports

Standard Report

```
psql -Aqtc \  
"SELECT profile.get_report('core16',8,9)" \  
-o report_8_9.html
```

Diff Report Report

```
psql -Aqtc \  
"SELECT profile.get_diffreport('core16', 8, 9, 11, 12)" \  
-o diff_report_8_9-11_12.html
```

PG_PROFILE - A look into the repository schema

```
# \dt profile.*  
List of relations  
Schema | Name | Type | Owner  
-----+-----+-----+-----  
profile | baselines | table | postgres

Conclusion - My 2 Cents

Extensibility is a benefit, not a workaround!

Very clean, pragmatic way to handle performance data

Sustainable repository approach

Not exactly the amount like the Oracle packs

But still a big point for considering Oracle folks on migrations

But perfect for nearly all common problems

Conclusion – What is missing?

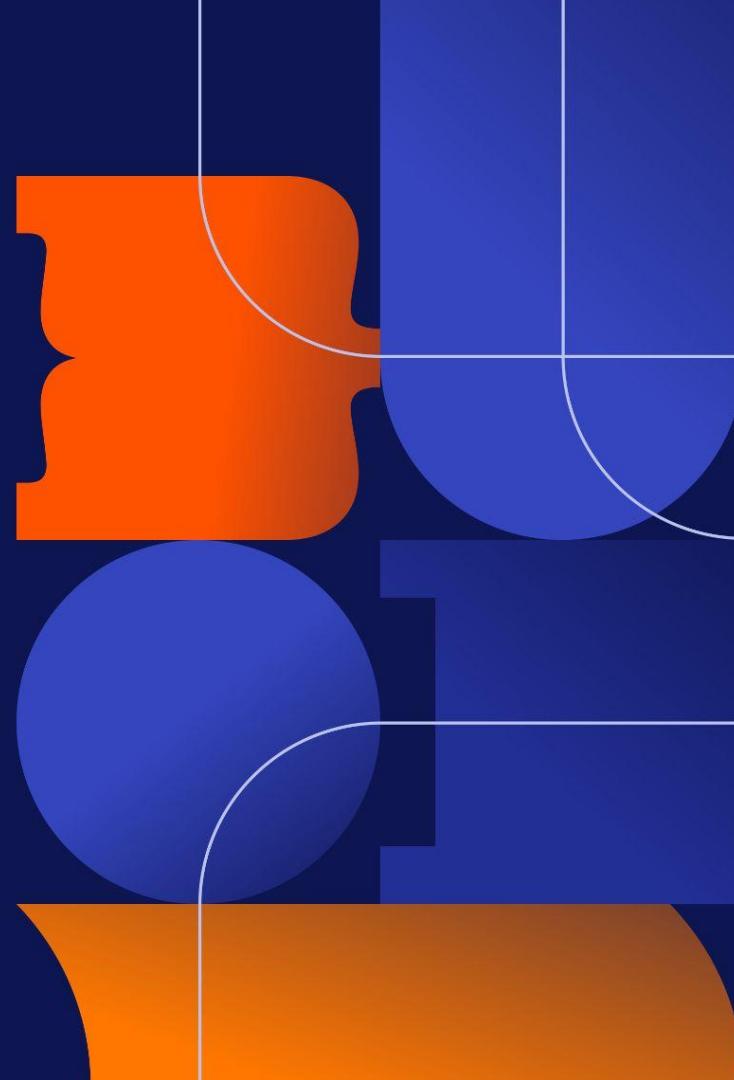

Own Job handling would be nice, but cron is fine!

Availability in DBaaS offerings or contrib

Still room for even more information pieces in reports

The trusted open
source data platform
for everyone

One data platform for your cloud needs
